

Education and skills training leading to employment is the most effective way of combating poverty.

As traditional job skills are made obsolete, Muslim Hands has undertaken various initiatives to provide quality education and training to the poor.

Muslim Hands Vocational Training Centres have been offering unemployed youth a chance to gain a variety of skills in computing, short-hand, electrical installation and maintenance, dress-making and other crafts such as welding and carpentry.

The success of Muslim Hands Vocational Training Centres, especially the Computer Literacy Centres has been phenomenal. With more than 3500 students graduating from our centres in the past 6 years. Many of them are now in full time employment.

Computer Literacy
