

Muslim Hands Safe Water Scheme:

Afghan refugee enjoys clean, safe drinking water at Chaman Refugee Camp

WATER: 1,649 Tube Wells Fitted!

In the past three years 1,649* Tube Wells have been fitted in Pakistan, India, Bangladesh, Senegal, Ethiopia and The Gambia...providing hundreds of communities with safe, clean drinking water.

For the small sum of **£100** (which can be paid in monthly instalments), you can fund the complete installation of a tube well. This will serve a whole community with clean and safe drinking water.

A **name plate** of your choice will be fitted to tube wells or at the location. A picture of the tube well and address of its location will be posted on completion.

Donations of less than £100 will be combined to pay for larger Safe Water projects in locations where tube wells are ineffective.

Such projects include deep well digging, laying water pipes and building water storage systems, as we have done recently in Pakistan and Afghanistan.

*(*figure correct. Oct 2002)*

"Every day 250 poor people DIE needlessly from illnesses related to dirty water. By the time you have read this page 1 more person will have died from a water related disease..." (WHO)

TREE PLANTATION IN BANGLADESH

Sustainable Development Project

Earlier this year Muslim Hands Bangladesh initiated a Tree-Plantation Project in and around the Dhaka area.

Banyan tree, big mango tree, fruit and several other forest/jungle trees are extremely important to the Bangladeshi people. Not only do they provide food, medicine, timber for homes etc. they also offer good protection during rainstorms and hurricanes.

Fertile land is extremely abundant throughout Bangladesh and unemployed landless labourers are readily employable for this project.

Bearing such advantages to mind and also that planting trees is a great form of Sadaqah Jariah (continuous charity), Muslim Hands Bangladesh has now begun planting trees of great variety and uses in the Dhaka area.
